AGENDA

Perfection doesn't exist...

Are you sure?

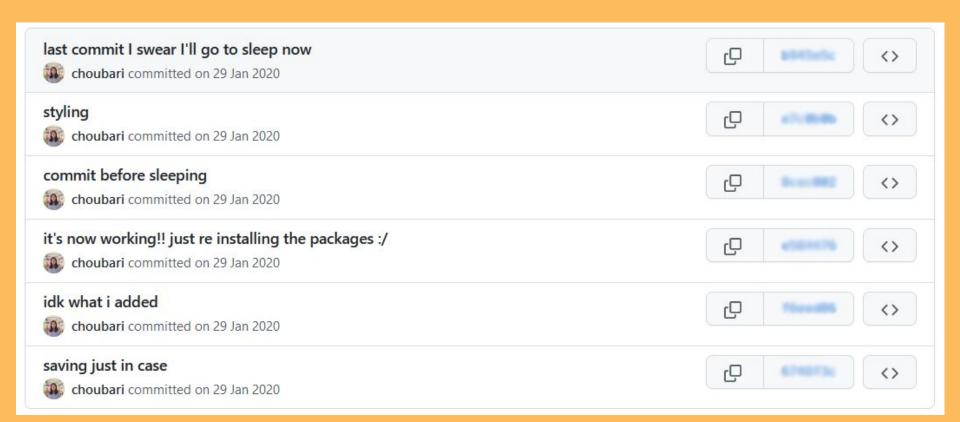

Show me how!

What's next!?

Perfection doesn't exist but...

You can set up guidelines to create better commits

Name a better commit message

- Limit the subject line to 50 characters
- Use imperative mood
- Remove unnecessary punctuation marks
- Use the body to explain what and why the change was made
- Make the commit message semantic and machine-readable for task automation

Conventional Commits

- **feat**: A new feature
- fix: A bug fix
- refactor: Code refactoring
- **test**: Additions or modifications to test cases
- docs: README, or anything related to documentation
- chore: Regular code maintenance

```
<type>[optional scope]: <description>
[optional body]
[optional footer(s)]
```

https://www.conventionalcommits.org/

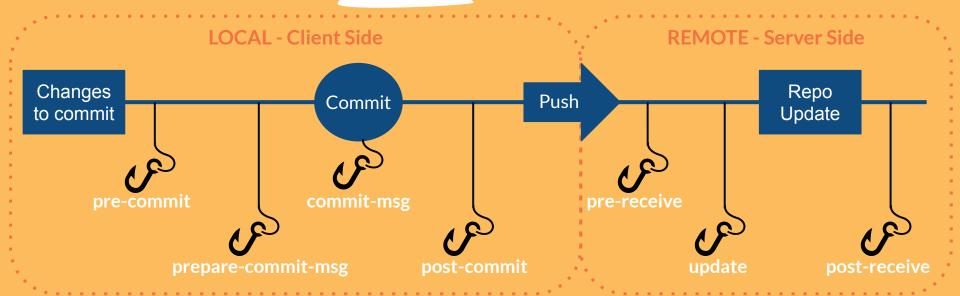

Save time for the next commits

Git Hooks

https://githooks.com/

Show me how!

Let's do a quick demo

Blabla What's Next!? You can easily set guidelines and automate recurring tasks

@choubari

Automate tasks & code review

- Format the code before a commit
- Run unit tests before a commit or a push
- Check if the file names and functions names are in Camel Case
- Prevent pushing deprecated code
- Ensure you are not committing any private keys
